Formats:

- .usl: symbolic logic
- .uslb: zlib compression
- .uslc: registry token compression
- .uslbq: quantum logic encryption
- .uslpack: runtime logic archive

Use Cases:

- Symbolic programming and secure logic delivery
- Logic modeling for education and AI
- Inter-language and multi-platform logic exchange

This system is now prepared for submission to IEEE, ISO, NIST, and arXiv for standardization and public availability.
